A: You can use the right-click to install the addon. It is very good and simple. Q: Which is the best ruby/python (or similar) scripting language for ubuntu 12.04 LTS? I'm trying to find the best scripting language for executing some simple scripts/commands. I've tried using both ruby and python. Ruby script seems to work pretty well and it's easy to learn, but it doesn't have pipes, forks or multiple processes, so it's hard to call from shell scripts, which are the most flexible in my opinion. python, on the other hand, is great for that, but calling scripts from shell scripts is pretty much impossible, and python's error handling is a nightmare. A: In my experience, Python's pipes and forks work pretty well in the context of a running process, where the standard input is redirected from a file or a pipe, and the standard output is written to a pipe or to a file. Both these features are implemented using the built-in file objects. Other links Events The objectives of the conference are to review recent developments in near and distant TMDs, discuss the progress in theory and experiment and propose theoretical proposals to open up new avenues in low energy processes. There are two sessions, one on theory and the other on experiment, and the discussion will be followed by a "light" session. The aims of the workshop are to discuss and present recent developments in the study of mesons containing heavy quarks and to highlight the link between such mesons and the description of many important processes such as the electromagnetic and hadronic decays of b-hadrons and the study of the spectra of the b-flavour mesons. As the description of pion-nucleon and rho-nucleon scattering in the literature is rather old, there is a need for a new review of the present status of the subject. Such a review should be able to update and synthesize the progress in all aspects of the field, and to discuss in particular the changes in the structure of the pion-nucleon and rho-nucleon amplitudes which underly the measured cross sections. During the last five years, the structure of the nucleon and its resonances have been reexamined using a resonance model composed of single and double poles, which has been successfully 648931e174

Electrosurgical haemostatic devices are used in the treatment of vascular injuries. The most common products consist of cylindrical platelets called hemostatic clips. However, these cartridges are expensive and need to be discarded after use. This study aimed to evaluate the efficacy of a new electrosurgical haemostatic device (Hemostat; Quaero Medical Ltd, Hong Kong, China) in perforator surgery. Thirty sheep were treated with a
